Experience

NimbleRx Redwood City, CA

Senior Software Engineer *Jul 2026 – Present*

- Integrated an acquired YC startup's **AI voice agent** for pharmacy inbound calls (refills, order status, SMS app links) onto system-agnostic Nimble APIs, live in ∼2 weeks; now handling ∼**1,500 calls/week**.
- Solo-designed v2 of the agent, expanding it from 4 to **13 tool calls**; a per-call randomized A/B cut upfront requests for a human from **31.6% to 10.6%** and raised fully resolved calls from 7.4% to 12.3%.
- Designed a zero-downtime pharmacy-product **state machine** replacing **13 conflicting fields** (∼500 references) for 7,000+ pharmacies; rebuilt 7 years of history and coordinated a 9-engineer cutover without a mandate.
- Cut holiday delivery-date support cases from 4+ in a holiday week to **0** by modeling each courier's schedule separately from pharmacy closures across 13 courier services, after outreach to 8 regional and specialty couriers.
- Led a feature-flag cleanup across 18 owners that cut stale flags **40%** (85 → 51), then built a weekly **Claude Code GitHub Action** that has opened 34 cleanup PRs with a public Slack digest.

Software Engineer *Sep 2025 – Jun 2026*

- Rebuilt ∼**$210k/month** in pharmacy incentive payouts as a solo full-stack project: auditable calculations, a Retool Finance review tool, and SendGrid owner emails, replacing hand-run SQL and manual emails.
- Shipped in-table bulk label printing for the pharmacy dashboard (4,044 jobs across 116 pharmacies in week one; now ∼**8k jobs/week**) and owned the courier v2 API migration behind it, moving **8,320 orders** with zero downtime.
- Fixed root causes across **56 pharmacy-reported cases** (#1 of 17 engineers), including a courier integration that had never placed an order (now ∼5.2k/month) and ∼214k unwanted texts/week to excluded patients.
- Built an **OpenAPI audience-grouping framework** with CI coverage checks so each client generates only its own APIs, cutting generated client code by ∼**174k net lines**; #1 in lines deleted org-wide.
- Cut a pharmacy-system integration's p95 latency **94%** (15.8s → 864ms) by batching N+1 queries, using JPA projections, and caching stable data in Redis.
- Built zero-to-one pilots end to end: a **React Native/Expo** counter tablet app with patient chat and order alerts (15 pharmacies, 30k+ pushes) and a Stripe card-reader checkout prototype.

Software Engineer Intern *Sep 2024 – Dec 2024*

- Unblocked launch at **85 pharmacies** with a React transaction-audit tool for self-serve Stripe reconciliation.
- Eliminated **86k invalid REST API errors/day** by updating Java Spring controllers and React flows to return correct empty-list responses for missing resources.
- Cut file-upload latency **30% platform-wide** by fixing S3 content-length headers and a high-overhead writer.

RBC Royal Bank Toronto, ON

Software Developer Intern *May 2024 – Aug 2024*

- Led 4 interns building a real-time **LLM note-taking assistant** for SREs that logged incident timelines and resolution notes (React, FastAPI, WebSockets); co-inventor on US patent application 2026/0057185 A1; 1 of 8 projects in a decade picked for bank-wide rollout.

Projects

What to Code | *Next.js, TypeScript, Supabase, Drizzle, pgvector* | Live demo Jun 2024 – Jan 2025

- Built and deployed a semantic GitHub-template recommender, curating **75 templates from 500 repos**.
- Launch post drew **500+ reactions**, 135 comments, and 100+ app-link requests.

Technical Skills

Languages: TypeScript, JavaScript, Java, Python, SQL, Rust, C/C++, HTML/CSS
Frameworks: React, Next.js, React Native/Expo, Spring Boot, Node.js, FastAPI
AI/LLM: LLM agents/tool calling (Pipecat), Claude Code, Gemini, Presidio, pgvector
Infrastructure: PostgreSQL, Redis, MongoDB, AWS (S3, SQS), Docker, Vercel, Supabase, Drizzle, Statsig
Practices: OpenAPI, zero-downtime migrations, feature flags, GitHub Actions, Jest, JUnit, Pytest, Playwright

Education

University of Alberta – B.Sc. Computer Engineering Co-op, Software Option 2025
